RFC 9903

A YANG Data Model for OSPF Segment Routing over the MPLS Data Plane

Abstract

This document defines a YANG data model that can be used to manage OSPF extensions for Segment Routing over the MPLS data plane.

Status of This Memo

This is an Internet Standards Track document.

This document is a product of the Internet Engineering Task Force (IETF). It represents the consensus of the IETF community. It has received public review and has been approved for publication by the Internet Engineering Steering Group (IESG). Further information on Internet Standards is available in Section 2 of RFC 7841.

Information about the current status of this document, any errata, and how to provide feedback on it may be obtained at <https://www.rfc-editor.org/info/rfc9903>.

1. Overview

This document defines a YANG data model [RFC7950] that can be used to manage OSPFv2 extensions for Segment Routing [RFC2328] [RFC8665] and OSPFv3 extensions for Segment Routing [RFC5340] [RFC8666] over the MPLS data plane. The defined YANG data model is an augmentation to the OSPF YANG data model [RFC9129].

The YANG data model in this document conforms to the Network Management Datastore Architecture (NMDA) [RFC8342].

1.1. Requirements Language

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "NOT RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in BCP 14 [RFC2119] [RFC8174] when, and only when, they appear in all capitals, as shown here.

1.2. Tree Diagrams

This document uses the graphical representation of a data model as defined in [\[RFC8340\]](#).

2. OSPF Segment Routing over MPLS YANG Data Model Scope

The YANG data model in this document consists of a single YANG module, "ietf-ospf-sr-mpls". The "ietf-ospf-sr-mpls" YANG module includes OSPF Segment Routing extensions for the MPLS data plane for both OSPFv2 [\[RFC8665\]](#) and OSPFv3 [\[RFC8666\]](#).

The "ietf-ospf-sr-mpls" YANG module requires support for the base Segment Routing module [\[RFC9020\]](#), which defines the global Segment Routing configuration independent of any specific routing protocol configuration, and support of the OSPF base model [\[RFC9129\]](#), which defines the basic OSPF configuration and state.

The "ietf-ospf-sr-mpls" module defines both the data nodes to configure OSPF Segment Routing MPLS extensions and the additions to the OSPF Link State Advertisements (LSAs) necessary to support Segment Routing over MPLS (SR-MPLS). The OSPF configuration includes:

- OSPF instance level configuration imported from the "ietf-segment-routing-mpls" YANG module, including the mapping server bindings and the per-protocol Segment Routing Global Block (SRGB) (refer to the "sr-control-plane" grouping [\[RFC9020\]](#)).
- OSPF area level configuration, which enables SR-MPLS on all interfaces as well as advertisement of SR-MPLS information in Link State Advertisements (LSAs).
- OSPF interface level configuration for Adjacency Segment Identifiers (Adj-SIDs) corresponding to specific neighbors on multi-access interfaces (OSPF interface type broadcast or Non-Broadcast Multi-Access (NBMA)). The adjacency-sid definitions are imported from the "ietf-segment-routing-mpls" YANG module (refer to the "igp-interface" grouping [\[RFC9020\]](#)).
- OSPF interface level configuration for Topology Independent Loop-Free Alternative (TI-LFA) using the MPLS data plane. TI-LFA is described in [\[RFC9855\]](#).

The operational state (read-only) additions specific to OSPFv2 LSA include:

- OSPFv2 Extended Prefix Range TLV encodings [\[RFC8665\]](#) in the OSPF Extended Prefix Opaque LSA [\[RFC7684\]](#).
- OSPFv2 Prefix-SID Sub-TLV encodings [\[RFC8665\]](#), including the OSPF Extended Prefix TLV, which is advertised in the OSPF Extended Prefix Opaque LSA [\[RFC7684\]](#).
- OSPFv2 SR-Algorithm, SID/Label Range TLV, SR Local Block TLV, and Segment Routing Mapping Server (SRMS) Preference TLV [\[RFC8665\]](#) advertised in the OSPFv2 Router Information Opaque LSA [\[RFC7770\]](#).

The operational state (read-only) additions specific to OSPFv3 LSA include:

- OSPFv3 Extended Prefix Range TLV encodings [RFC8666] in the OSPFv3 E-Intra-Area-Prefix-LSA, E-Inter-Area-Prefix-LSA, E-AS-External-LSA, and E-Type-7-LSA [RFC8362].
- OSPFv3 Prefix-SID Sub-TLV encodings [RFC8666] in the OSPFv3 Intra-Area-Prefix TLV, Inter-Area-Prefix TLV, External-Prefix TLV [RFC8362], and OSPFv3 Extended Prefix Range TLV [RFC8666].
- OSPFv3 Adj-SID Sub-TLV [RFC8666] in the OSPFv3 Router-Link TLV [RFC8362].
- OSPFv3 LAN Adj-SID Sub-TLV [RFC8666] in the OSPFv3 Router-Link TLV [RFC8362].
- OSPFv3 SR-Algorithm, SID/Label Range TLV, SR Local Block TLV, and SRMS Preference TLV [RFC8666] advertised in the OSPFv3 Router Information LSA [RFC7770].

3. OSPF Segment Routing over MPLS YANG Module

[RFC4915], [RFC6991], [RFC8102], [RFC8294], [RFC8349], [RFC8665], [RFC8666], [RFC9020], [RFC9129], [RFC9587], and [RFC9855] are referenced in the YANG module.

Figure 1

4. Security Considerations

This section is modeled after the template described in [Section 3.7](#) of [\[YANG-GUIDE\]](#).

The "ietf-ospf-sr-mpls" YANG module defines a data model that is designed to be accessed via YANG-based management protocols, such as NETCONF [RFC6241] and RESTCONF [RFC8040]. These YANG-based management protocols (1) have to use a secure transport layer (e.g., SSH [RFC4252], TLS [RFC8446], and QUIC [RFC9000]) and (2) have to use mutual authentication.

The Network Configuration Access Control Model (NACM) [RFC8341] provides the means to restrict access for particular NETCONF or RESTCONF users to a preconfigured subset of all available NETCONF or RESTCONF protocol operations and content.

There are a number of data nodes defined in this YANG module that are writable/creatable/deletable (i.e., "config true", which is the default). All writable data nodes are likely to be sensitive or vulnerable in some network environments. Write operations (e.g., edit-config) and delete operations to these data nodes without proper protection or authentication can have a negative effect on network operations. The following subtrees and data nodes have particular sensitivities/vulnerabilities:

- /ospf:ospf/segment-routing/enabled - Modification to the enablement for SR could result in a Denial-of-Service (DoS) attack. If an attacker disables SR, it will cause traffic disruption.
- /ospf:ospf/segment-routing/bindings - Modification to the local bindings could result in a DoS attack.
- /ospf:ospf/protocol-srgb - Modification of the protocol SRGB could be used to mount a DoS attack. For example, if the protocol SRGB size is reduced to a very small value, a lot of existing segments could no longer be installed, leading to a traffic disruption.
- /ospf:interfaces/ospf:interface/segment-routing - Modification of the Adj-SID could be used to mount a DoS attack. Change of an Adj-SID could be used to redirect traffic.
- /ospf:interfaces/ospf:interface/ospf:fast-reroute/ti-lfa - Modification of the TI-LFA enablement could lead to traffic disruption.

Some of the readable data nodes in this YANG module may be considered sensitive or vulnerable in some network environments. It is thus important to control read access (e.g., via get, get-config, or notification) to these data nodes. Specifically, the following subtrees and data nodes have particular sensitivities/vulnerabilities:

- The "ietf-ospf-sr-mpls" module augments the base OSPF module Link State Database (LSDB) with various TLVs. Knowledge of these data nodes can be used to attack other routers in the OSPF domain. These attacks are documented in [RFC9129].
- Knowledge of the Prefix and Adjacency SIDs advertised in LSAs could facilitate a targeted attack on the data plane by knowing the topology and path for MPLS segment-routed packets. Examples include the OSPFv2 extended-prefix-opaque-LSA/prefix-sid-sub-tlvs and OSPFv3 e-router-tlvs/link-tlv/sub-tlvs/ospfv3-lan-adj-sid-sub-tlvs.
- Knowledge of Prefix and Adjacency SIDs may also divulge a view of the Segment Routing network topology architecture, which may be considered a proprietary asset.
- Knowledge of the advertised SID/Label Range TLVs, SR Local Block TLVs, and SRMS TLVs may facilitate a DoS attack on the advertising node's SR and SRMS functionality. Examples

include augmentations to the OSPFv2 ri-opaque/sid-range-tlvs and OSPFv3 router-information/local-block-tlvs.

There are no particularly sensitive RPC or action operations.

This YANG module uses groupings from other YANG modules that define nodes that may be considered sensitive or vulnerable in network environments. Refer to the Security Considerations of [RFC9020] for information as to which nodes may be considered sensitive or vulnerable in network environments.

5. IANA Considerations

This document registers a URI in the "IETF XML Registry" [RFC3688]. Following the format in [RFC3688], the following registration has been made:

URI: urn:ietf:params:xml:ns:yang:ietf-ospf-sr-mpls

Registrant Contact: The IESG.

XML: N/A; the requested URI is an XML namespace.

This document registers a YANG module in the "YANG Module Names" registry [RFC6020].

Name: ietf-ospf-sr-mpls

Maintained by IANA?: N

Namespace: urn:ietf:params:xml:ns:yang:ietf-ospf-sr-mpls

Prefix: ospf-sr-mpls

Reference: RFC 9903

Appendix A. A Configuration Example

The following is an XML example using the "ietf-ospf-sr-mpls" YANG module and [RFC9020].

Note: '\ ' line wrapping per [RFC8792].

```

<?xml version='1.0' encoding='UTF-8'?>
<routing xmlns="urn:ietf:params:xml:ns:yang:ietf-routing">
  <router-id>1.1.1.1</router-id>
  <control-plane-protocols>
    <control-plane-protocol>
      <type xmlns:ospf="urn:ietf:params:xml:ns:yang:ietf-ospf">\
        ospf:ospfv2</type>
      <name>OSPFv2</name>
      <ospf xmlns="urn:ietf:params:xml:ns:yang:ietf-ospf">
        <areas>
          <area>
            <area-id>0.0.0.0</area-id>
            <segment-routing xmlns="urn:ietf:params:xml:ns:yang:\
              ietf-ospf-sr-mpls"></segment-routing>
            <interfaces>
              <interface>
                <name>eth0</name>
                <segment-routing xmlns="urn:ietf:params:xml:ns:\
                  yang:ietf-ospf-sr-mpls">
                  <adjacency-sid>
                    <adj-sids>
                      <value>3888</value>
                    </adj-sids>
                  </adjacency-sid>
                </segment-routing>
              </interface>
            </interfaces>
          </area>
        </areas>
        <segment-routing xmlns="urn:ietf:params:xml:ns:yang:\
          ietf-ospf-sr-mpls">
          <enabled>true</enabled>
        </segment-routing>
        <protocol-srgb xmlns="urn:ietf:params:xml:ns:yang:\
          ietf-ospf-sr-mpls">
          <srgb>
            <lower-bound>4000</lower-bound>
            <upper-bound>5000</upper-bound>
          </srgb>
        </protocol-srgb>
      </ospf>
    </control-plane-protocol>
  </control-plane-protocols>
</routing>

```

The following is the same example using JSON format.

```

Acknowledgements

The authors wish to thank Dean Bogdanovic, Kiran Koushik Agrahara Sreenivasa, and Derek Yeung for their YANG module discussions.

The authors wish to thank Yi Yang, Alexander Clemm, Gaurav Gupta, Ladislav Lhotka, Stephane Litkowski, Greg Hankins, Manish Gupta, Alan Davey, Divakaran Baskaran, Reshad Rahman, Tom Petch, and Corey Bonnell for their thorough reviews and helpful comments.

The authors wish to thank Julien Meuric for a very meticulous Routing Directorate review.

The authors wish to thank Mohamed Boucadair and Ketan Talaulikar for extensive AD reviews for the IESG Telechat. Thanks to Éric Vyncke and Mahesh Jethanandani for review comments.
